ABOUT CYSTIC FIBROSIS

- CF is a life-threatening disease that affects the lungs and digestive systems of approximately 30,000 children and adults in the United States
- More than 10 million Americans are unknowing, symptomless carriers of the defective CF gene
- The disease occurs in one of every 3,500 live births in all Americans, and about 1,000 new cases are diagnosed each year

CYSTIC FIBROSIS FOUNDATION

The mission of the Cystic Fibrosis Foundation, a nonprofit donor-supported organization, is to assure the development of the means to cure and control cystic fibrosis and to improve the quality of life for those with the disease

OUR SUCCESS

By applying the same results-driven approach of a successful for-profit company, the CF Foundation has created an innovative business model that is making a difference in the lives of those with cystic fibrosis. When the CF Foundation was established in 1955, children with CF were not expected to live long enough to attend elementary school. Due in large part to the Foundation's aggressive investments in innovative research and comprehensive care, people with this disease are now living into their 30s, 40s, and beyond.
