**\*\*Additional pledges can be listed on a separate sheet\*\***

Cystic fibrosis (CF) is a genetic disease affecting approximately 30,000 children and adults in the United States. A defective gene causes the body to produce abnormally thick, sticky mucus. This abnormal mucus leads to chronic and life-threatening lung infections and impairs digestion. Currently, there is no cure. By investing in the Cystic Fibrosis Foundation you are helping to fund the landmark research that will, one day, make a tremendous difference in the lives of those with the disease. With your help, we can give the children and adults with CF the quality of life and the future they deserve.
