

# The Story of Our Science

---

1. Cystic fibrosis is a genetic, life-threatening disease.
2. People with CF are living longer than ever before, but many are still dying too young.
3. The Foundation has made great progress in prolonging and improving life through innovative care and research.
4. Because of Foundation support, we have game-changing drugs that treat more than half of all people with CF.
5. **But that's not enough.**
6. There are many different CF mutations, and we are committed to leaving no one behind.
7. We're pursuing innovative science to not just develop treatments for some — but ultimately a CURE for all.
8. **It will take the continued support of our community to reach our ultimate goal.**
