

CF Foundation Specimen Banking			
Study Long Title	CFF Metabolomic Biomarkers		
Short Name	CFF Metabolomic Biomarkers (SAAVED09A0)		
Specimens Currently Available to Other Researchers	Yes		
Current Study Status	Closed		
Study Timeline Metrics			
	Planned	Actual (Sponsor)	
Begin Enrollment	02/01/2009	08/19/2009	
Complete Enrollment		05/17/2010	
Study Complete		09/01/2010	
Number of Patients Planned	30		
General Study Information			
Study Type	Observational		
Intervention Type			
Control Type			
Blinded	No		
Randomized	No		
Duration of Subject Participation	1 Days		
Endpoints Evaluated			
Trial Specific Link on ClinicalTrials.gov			
Primary Manuscript Link			
Primary Manuscript Citation			
Eligibility Criteria			
Age	>= 18 Years		
FEV1	No FEV1 requirement		
P. aeruginosa status	Not Applicable		
B. cepacia status	Not Applicable		
Other Primary Eligibility Requirements	Subjects must have one deltaf508 allele.		
Biorepository Specimen Information			
General Specimen Information			
The goal of this study was to collect a single specimen for banking from 30 CF subjects in a clinically stable state. The samples collected were from subjects who had been fasting for at least four hours. Additionally samples were collected from age matched healthy controls.
